Maher Tizeeni

Backend Developer · Full-Stack Capable

Latakia, Syria | maher.tizeeni@gmail.com | +963 990 471 257 | linkedin.com/in/mahertizeeni | github.com/eng-mahertizeeni

SUMMARY

Backend developer and Software Engineering graduate specializing in Laravel, with production experience across multi-tenant, API-driven platforms. I build around deliberate architecture — repository/service-layer patterns, SOLID principles, and hand-rolled RBAC — and I'm comfortable owning a system end-to-end: REST APIs, real-time features, third-party integrations, Dockerized CI/CD deployments, and full-stack features with React/TypeScript when a project calls for it.

SKILLS

Backend	PHP 8.2, Laravel 12/13, RESTful APIs, MySQL, Eloquent ORM, Redis, Queues
Architecture & Patterns	OOP & SOLID Principles, Repository Pattern, Service Layer Pattern, Multi-tenancy, Custom RBAC / Permission Systems
Real-time & Integrations	Laravel Reverb (WebSockets), Odoo ERP (XML-RPC/REST), Firebase, Edfapay, WhatsApp & Telegram Bot APIs, AI Chat (Groq)
Security & Auth	Laravel Sanctum, OAuth2, Policies & Gates, API Security
DevOps & Testing	Docker, GitLab CI/CD, Git, Linux, PHPUnit, Swagger / OpenAPI (L5-Swagger)
Frontend (Working Knowledge)	React, TypeScript, Tailwind CSS, Blade

PROJECTS

Car Wash Franchise Management System

Production — Lead Backend Developer · 2026–Present

Laravel 12, MySQL, Odoo ERP, Firebase, Edfapay, Docker, REST API

- Architected a multi-level, multi-tenant backend (System → Company → Franchise → Branch → Customer) for a car wash franchise SaaS platform
- Built a full workshop job-card system covering car wash, maintenance and spare-parts jobs, with technician assignment and a quotation approval/revision workflow
- Integrated Odoo ERP with real-time, queue-based sync (products, inventory, invoices, customers, subscriptions) plus inbound webhooks
- Implemented item-level Credit Notes, a transferable loyalty program, gift-wash cards, and Google/Apple Wallet passes for digital memberships
- Delivered executive/BI analytics dashboards, multi-channel notifications (FCM, WhatsApp, Telegram), and an AI chat assistant

Institute Management Platform

Personal Project — Full-Stack · 2026–Present

Laravel 13, Sanctum, MySQL, React, TypeScript, Swagger/OpenAPI

- Designed a multi-tenant SaaS platform for educational institutes with three fully isolated portals (admin, institute staff, student), each scoped by subdomain and Sanctum token ability
- Built a hand-rolled RBAC system (no package) with role-based defaults and per-user permission overrides, enforced via custom middleware
- Modeled two distinct relationship layers — institute enrollment vs. course registration — so a student can belong to multiple institutes under one account
- Implemented a finance module that snapshots price at registration time, so later price changes never retroactively affect past students
- Documented the REST API with Swagger/OpenAPI and built the full React + TypeScript frontend consuming it

Government Complaints Platform

Graduation Project · 2025

Laravel, MySQL, Laravel Reverb, Docker, REST API

- Built a multi-role complaints management system for citizens, government entities and admins, with anonymous, token-tracked reporting
- Implemented real-time chat between citizens and entity employees using Laravel Reverb (WebSocket broadcasting)
- Integrated an Arabic AI-powered chatbot (Groq) to assist citizens filing complaints
- Designed secure REST APIs with Sanctum authentication, permission-based access control, and queue-based background processing
- Deployed with Docker and environment-based configuration on Render

EDUCATION

B.Sc. in Informatics Engineering — Software Engineering, Latakia University

Sep 2020 – Sep 2025

Latakia, Syrian Arab Republic · Coursework in software engineering principles, backend development, database systems, and system architecture.

Languages: Arabic (Native), English (Intermediate)

Soft Skills: Problem Solving, Teamwork, Time Management, Adaptability
